FEBRUARY

place, and grows in almost every kind of soil. It begins flowering in June and July, and is nearly the last plant that yields to the frosts of November," while Pursh in the same year reported the plant "In pastures on roadsides: New England." Since Pursh's explorations in America were carried on between 1799 and 1811 it is probable that the plant had become introduced very early in the last century. Michaux apparently did not mention the plant in 1803 and in Manasseh Cutler's Account of some of the vegetable productions of this region, published in 1785, there is no mention of any plant which seems satisfactorily referable to Leontodon autumnalis.-M. L. FERNALD.

LONICERA SEMPERVIRENS ESTABLISHED IN WESTFORD, MASSACHU-SETTS. — About the first of October it was reported to me that the Trumpet Honeysuckle was growing wild in the south part of the town of Westford. I have been to see the place, and found in a pasture on the Amos Leighton farm three spots where the plant was growing on the eastern slope of the pasture, among berry bushes, sweet fern, blackberry vines, etc. At the first station the Lonicera was abundant and covered a space 15 feet in diameter. At the second there were only a few roots under a walnut tree. Miss Leighton told me she had only seen one blossom here, and that one was white. The third station had five or six strong plants. All the stations were within a quarter of a mile or less from each other, and all a half a mile from the farm house. As I do not find that this Lonicera has been reported from many towns in Middlesex County, its occurrence at Westford may be a matter of interest. - EMILY F. FLETCHER, Westford, Massachusetts.

THE Handbook of the Trees of New England¹ is a real handbook which will be heartily welcomed by every one who knows or cares to know anything about our trees. Although treating primarily the trees of New England, the book is practically as useful throughout the Northern States and Canada, for it is only an exceptional tree of the North which does not occur within the New England States.

¹Handbook of the Trees of New England, with Ranges throughout the United States and Canada, by Lorin L. Dame, S. D. and Henry Brooks. Plates from original Drawings by Elizabeth Gleason Bigelow. Boston, Ginn & Company, 1902. Trade edition (cover with gold lettering), \$1.50; school edition (black lettering), \$1.25.
